PROFESSIONAL PROFILE

MetaWorld Civil Consulting is a small company specializing in Land Development and Infrastructure Design. Started in 2013, our company consists of a team of knowledgeable and dedicated professionals with decades of experience. Amongst our team are a Licensed Professional Engineer (P.E.) and a Certified Consultant Meteorologist (C.C.M.) with a Ph.D. We serve in three main capacities: land improvement, research and education; with the goal of economical, responsible and sustainable development. At MetaWorld Civil we turn potential into progress!

THE METAWORLD ADVANTAGE

The advantage of working with MetaWorld Civil Consulting lies in our mode of operation. We adhere to methods that we believe the new era of engineering will consist of. Our professionals perform their own work, not just sign the final product. This basic rule of operation means that every aspect of every project is fully analyzed and drafted by qualified personnel, and that the final product is of the highest quality in technical proficiency and constructability. This also means that our overhead costs are much lower than traditional engineering companies. Additionally, all of our projects are undertaken with our communities in mind, and with the goal of promoting and applying methods of sustainable development. This results in lower impact fees and maintenance costs for our clients. When our clients work with MetaWorld Civil Consulting, they get the advantage of knowing that they receive a higher quality product at a more competitive price.
